

Practical Test: Full Stack Developer

2 Years Experience | Real Estate Lead Management Mini Dashboard

Item	Details
Role	Full Stack Developer - 2 Years Experience
Test Type	Practical / Case Study Based Coding Test
Time Limit	2 to 3 hours
Business Domain	Real Estate Sales and Lead Management
Expected Output	Working mini application with clean code and explanation

Candidate Instructions

Dear Candidate,

As part of your practical round, please build a mini web application based on the real estate business scenario below. You may use your preferred full-stack tools, but your code should be clean, structured, and easy to explain.

- Complete the test within 2 to 3 hours.
- Use your own code. Do not copy a complete solution from the internet or AI tools.
- You may refer to documentation for syntax, but you must understand and explain your work.
- Focus on functionality first, then UI polish.
- Mention clearly if any part is incomplete.

Case Study: Real Estate Lead Management Mini Dashboard

Fute Services works with real estate clients. The sales team needs a simple dashboard to manage buyer enquiries received from property listing pages. Your task is to build a mini lead management system where an admin can login, view leads, add leads, update lead status, delete leads, and search/filter enquiries.

Technology Options

- Frontend: React.js / Next.js / HTML-CSS-JavaScript with component structure
- Backend: Node.js + Express.js preferred
- Database: MongoDB / MySQL / PostgreSQL / SQLite / local JSON storage / browser localStorage
- If database setup takes time, use mock data or local storage and explain how you would connect a database in a real project.

Main Requirements

1. Login Page

Create a simple admin login page using the following dummy credentials:

Email	Password
admin@futeservices.com	admin123

- Email is required.
- Password is required.
- Show error message for wrong email or password.
- After successful login, redirect the user to the dashboard.
- Store login state using suitable method such as state, localStorage, session, or token.

2. Dashboard Summary

After login, show dashboard summary cards:

- Total Leads
- New Leads
- Contacted Leads
- Site Visit Scheduled Leads
- Closed Leads
- Lost Leads

Allowed lead statuses: New, Contacted, Site Visit Scheduled, Closed, Lost.

3. Lead List Table

Display the leads in a table with the following columns:

- Lead Name
- Phone Number
- Email
- Interested Property
- Unit Type - 2 BHK / 3 BHK / Villa
- Budget
- Status
- Created Date
- Actions - View, Edit, Delete

4. Add Lead Form

Create a form to add a new buyer enquiry lead. Fields required:

- Full Name
- Email
- Phone Number
- Interested Property
- Unit Type
- Budget

- Lead Source - Website / Facebook / Referral / Walk-in
- Status
- Notes

Validation required:

- Name is required.
- Email is required and should be valid.
- Phone number is required.
- Unit type is required.
- Budget is required.
- Status is required.

5. Edit Lead

The user should be able to edit lead details such as status, budget, notes, unit type, and contact details.

6. Delete Lead

The user should be able to delete a lead. Before deleting, show a confirmation message:

Are you sure you want to delete this lead?

7. Search, Filter, and Sort

- Search by lead name or phone number.
- Filter by status.
- Filter by unit type.
- Sort by created date.

Suggested Sample Lead Data

Name	Phone	Property	Unit	Budget	Status
Ravi Kumar	9876543210	Green Valley Residency	2 BHK	75 Lakhs	New
Priya Sharma	9845012345	Lakeview Heights	3 BHK	1.1 Cr	Contacted
Arjun Mehta	9900011122	Palm Grove Villas	Villa	2.5 Cr	Site Visit Scheduled
Neha Rao	9988776655	Green Valley Residency	3 BHK	95 Lakhs	Closed

Bonus Features

Complete these only after finishing the main requirements.

- Lead Details Page: On clicking View, show full lead details.
- Follow-up Date: Add follow-up date field and show upcoming follow-ups.
- Export CSV: Add a button to export leads as a CSV file.
- Authentication Token: Use JWT or session-based authentication instead of simple dummy login.
- Backend APIs: Create POST /login, GET /leads, POST /leads, PUT /leads/:id, DELETE /leads/:id.
- Responsive UI: Make the dashboard usable on mobile and tablet.

- Basic Analytics: Add simple count or chart for lead status distribution.

Expected Folder Structure

You may follow any clean structure. Example:

```
frontend/  
  src/components/  
  src/pages/  
  src/services/  
backend/  
  routes/  
  controllers/  
  models/  
README.md
```

Submission Format

1. GitHub repository link or zip file.
2. Screenshot or short screen recording of the working application.
3. Setup instructions in README file.
4. Short explanation of architecture and technologies used.
5. Mention incomplete parts, if any.
6. Be ready for a 5-10 minute code explanation after submission.

Evaluation Criteria

Evaluation Area	Marks
Login and validation	10
Dashboard summary UI	10
Lead list table	10
Add, edit, delete functionality	20
Search, filter, and sort	10
Backend/API/database understanding	15
Code structure and reusable components	10
UI/UX and responsiveness	5
Code explanation	10
Total	100

What We Will Check During Review

- Can you build CRUD functionality independently?
- Is your code clean, readable, and structured?
- Do you understand frontend-backend-data flow?
- Can you validate forms and handle errors properly?
- Can you debug and explain your own code?
- Do you understand the real estate lead workflow?
- Did you honestly mention what is complete and incomplete?

Final Note

This task is designed to test practical delivery skills for a 2-year experienced full-stack developer. We value clean implementation, clear thinking, ownership, and honest explanation more than unnecessary complexity.
